

# Bridges Across the Language Divide – EU-BRIDGE

**EU-BRIDGE's goal:** Developing automatic transcription and translation services that will permit and facilitate the development of innovative products and applications that require the transcription of and translation between languages.

The project will prove the usability of the services by implementing four applications as use cases:

- Captioning translation for TV broadcasts
- University lectures translation
- European Parliament translation
- Unified communication translation

**EU-BRIDGE's results:** High performing speech translation technology, more cost effective media transcription and translation systems developed throughout the project in a commercial setting.
