

Bridges Across the Language Divide

www.eu-bridge.eu

EU-BRIDGE: Develops automatic transcription and translation services that facilitates the development of innovative products and applications that require language technologies.

The project proves the usability of the services by implementing four applications as use cases:

- **Captioning Translation for TV Broadcasts:** Speech processing technologies improve the work flow in captioning TV shows and translating the captions into multiple languages.
- **University Lecture Translation:** Spoken content of university lectures is translated in real time and provided as subtitles. The system is currently deployed in lecture halls at the Karlsruhe Institute of Technology.
- **European Parliament Translation Support:** EU-BRIDGE identifies opportunities for applying language technology in the interpretations of the European Parliament.
- **Unified Communication Translation:** A web-based speech translation service within a unified communication platform is introduced to support multilingual webinars.

EU-BRIDGE results: High performing speech translation technology, more cost effective media transcription and translation systems developed throughout the project in a commercial setting.
